

# LS 33600

## Primary Li-SOCl<sub>2</sub> cell

### High energy density 3.6 V D-size bobbin cell

Saft's LS 33600 cell is ideally suited for long-term applications (typically from 5 to 20+ years), featuring low base currents and periodic pulses.

#### Benefits

- High capacity and high energy (1185 Wh/l and 680 Wh/kg)
- High voltage response, stable during most of the lifetime of the application
- Wide operating temperature range (-60°C / +85°C)
- Low self-discharge rate, compatible with long operating life (less than 1% per year of storage, at +20°C, after 1 year)
- Superior resistance to corrosion
- Low magnetic signature

#### Key features

- Bobbin construction
- Well controlled passivation
- Hermetic construction with glass-to-metal seal
- Stainless steel container
- Non-flammable electrolyte

Other configurations upon request	

<sup>(1)</sup> Dependent upon current drain, temperature, cut-off and cell orientation.

<sup>(2)</sup> Under 400 mA / 0.1 second pulses, drained every 2 minutes at +20°C from undischarged cells during 24h, with 10 µA base current, yield voltage readings above 3.0V after initial stabilisation. The readings may vary according to the pulse characteristics, the temperature, and the cell's previous history. Fitting the cell with a capacitor may be recommended in severe conditions or for high pulse currents. Consult Saft.

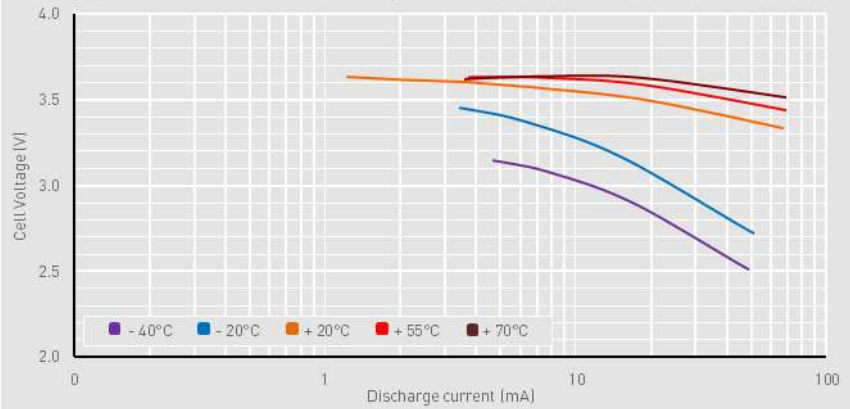

<sup>(3)</sup> Operation above ambient temperature may lead to reduced capacity and lower voltage readings. Consult Saft.

<sup>(4)</sup> For more severe conditions, consult Saft.

## Storage

- The storage area should be clean, cool (preferably not exceeding +30°C), dry and ventilated

## Warning

- Fire, explosion and burn hazard
- Do not recharge, short circuit, crush, disassemble, heat above +100°C (+212°F), incinerate, or expose contents to water
- Do not solder directly to the cell (use tabbed cell versions instead)
